

Suitable for Ammonia

The SG-1300 sight glass kit includes the glass prism sight glass, O-Ring (Part Number 2-023-002), Quad-Ring (Part Number 2—023-003) and mounting hardware.

The SG-1300 can be used on any compressor with a 3 bolt 17/8" B.C. sight glass. The sight glass unites the refraction indices of glass and oil resulting in total prism disappearance during contact with oil. Under partial oil conditions, the prism level marker will appear as a bright double line of reflected light extending upward from the oil pool.
